MARITIME SOLUTIONS IN **SURFACE SHIPBUILDING**

ABOUT US

As Rheinmetall's Naval Systems division, **we deliver integrated maritime solutions for modern surface fleets,** combining the expertise of four **highly specialised shipyards in northern Germany** with international operations and engineering offices. Customers benefit from tailor-made, intelligent and cost-efficient shipbuilding solutions from a single source, backed by innovation, technical excellence and decades of naval expertise. **Every project begins with a deep understanding** of operational requirements. Close collaboration with customers ensures that specific needs are **translated into high-performance naval vessels, coastguard vessels, autonomous systems and comprehensive support services.**

From design and construction to sustainment and modernisation, **Rheinmetall supports fleets throughout their entire life cycle,** helping to **maximise availability and maintain mission readiness.** In addition to construction across our own shipyard network, licensed production and technology transfer support local manufacturing capabilities at customer facilities worldwide. As a **pioneer in autonomous maritime technologies,** we also deliver advanced solutions for manned-unmanned teaming (MUM-T), enabling navies to enhance operational flexibility, increase force effectiveness and prepare for the evolving demands of future maritime operations.

SHAPING THE FUTURE OF NAVAL DEFENCE

Responding to growing naval requirements and increasing defence investments worldwide, Rheinmetall offers a powerful full-range portfolio for state-of-the-art surface vessels, supported by a highly modern digital infrastructure.

Through our own capabilities and a strong partner network, both within and outside Rheinmetall, we provide customers with seamless access to key naval technologies, including missiles and launchers, naval guns, missile defence systems, sensors, combat systems and mission-critical electronics.

By integrating these components into a coherent and interoperable architecture, we reduce complexity while enhancing operational effectiveness. We are a trusted partner, capable of delivering future-ready naval capabilities – from platform to mission systems all from a single source.
