

ATTACK ACCURACY

SSW40 GRENADE LAUNCHER

SSW40 is an automatic, magazine-loaded 40mm grenade launcher, designed for highest firepower in a shoulder-fired grenade launcher. Its dimensions, low weight and ergonomics make SSW40 extremely accurate and easy to handle over longer periods. The self-regulating dampening system allows SSW40 to fire 40mm MV-ammunition as well as 40mm LV-ammunition with minimized user stress, enabling:

- lethal effects up to 900 m,
- increased first-hit capability,
- significantly reduced time-of-flight.

SSW40 is capable to include Air Burst Capability using FCS-TacRay Ballistic (LRF with Ballistic Computer) in combination with IR-Programming Unit (IR-PU).
