Fuchs JAGM – next-generation missile tank destroyer for ground and air targets

At Enforce tac 2026 Rheinmetall and Lockheed Martin will show the Fuchs JAGM for the first time at a trade fair in Germany. The Fuchs JAGM is a highly mobile next generation missile tank destroyer designed to combat a wide range of threats on land and in the air.

The Fuchs JAGM is the world's first vehicle equipped with 24 vertically launched AGM-179 Joint Air-to-Ground Missile (JAGM) or AGM-114L HELLFIRE Longbow guided missiles from Lockheed Martin. In combination with its state-of-the-art sensor package, it can detect and engage multiple threats on the battlefield at any time. The Fuchs JAGM is thus capable of engaging up to 24 battle tanks, as well as air targets in rapid succession without reloading.

JAGM is a multi-sensor missile that can also be fired in ground-to-ground and ground-to-air applications. The missile has a range of up to 16 kilometres and features a tandem shaped charge fragmentation warhead. The JAGM's multimode seeker, which has been proven in numerous flight tests, features an improved semi-active laser sensor (SAL) for precision strikes and a fire-and-forget millimetre wave radar (MMW) for moving targets in all weather conditions. The JAGM thus offers improved performance against stationary and moving armoured targets, air defence systems, patrol boats, air targets, artillery guns and launchers, radar installations and C2 nodes, as well as bunkers and other structures in urban and complex terrain.

The Fuchs Evolution, the latest version of Rheinmetall's battle-proven and reliable 6x6 armoured transport vehicle, serves as the carrier vehicle for the system. With more than sixty variants in service in over nine countries, the Fuchs has earned an excellent reputation worldwide. The latest Fuchs variant features an improved powertrain with ABS and CTIS, a modern digital electrical system and a digital vehicle architecture in accordance with NATO Generic Vehicle Architecture (NGVA). The vehicle offers a high level of protection against ballistic and CBRN threats. It is also designed for higher payloads. Integrated test equipment (BITE) with interactive maintenance procedures and external vehicle diagnostics facilitates fleet management. The enlarged interior provides greater driving and operating comfort.

► Key facts

- Rheinmetall and Lockheed Martin present the Fuchs JAGM – a next-generation missile tank destroyer
- Highly mobile combat vehicle for engaging ground and air targets
- 24 JAGM missiles on board; range up to 16 kilometres
- Visit us at Enforce Tac - Hall 11, stand 310 and Hall 10, stand 426

Dr Björn Bernhard, Head of the Vehicle Systems Division: "This partnership is proof of our commitment to advancing international cooperation and delivering innovative solutions that meet the changing requirements of our global customers. By combining the Fuchs, which has proven itself in service from the North Cape to the deserts of the Middle East, with the precision of the JAGM and HELLFIRE, we are setting a new standard for modern guided missile systems on the battlefield. We look forward to continuing our collaboration with Lockheed Martin and identifying new opportunities to drive growth and innovation in the global defence industry."

"The integration of our JAGM and HELLFIRE missiles into the Fuchs creates a groundbreaking mobile vertical launch system that combines the best of Lockheed Martin's battle-proven capabilities and Rheinmetall's expertise," said Paula Hartley, Vice President & General Manager Tactical Missiles at Lockheed Martin. "

Visitors to Enforce Tac can view the Fuchs JAGM in the "Armed Forces Area" at stand 310 in Hall 11. We also look forward to seeing you at our Enforce Tac stand 426 in Hall 10.
