### **Rheinmetall at Enforce Tac 2026: PTAL – the laser light module for handguns**

Rheinmetall's new Pistol Tactical Aiming Laser (PTAL) is a compact lightweight attachment module specially designed for handguns. It is made by Rheinmetall Soldier Electronics in Stockach on Lake Constance.

For target illumination, an infrared close-range illuminator and white light are available to the operator for use in all operational situations. In addition, the PTAL is equipped with an IR aiming laser and a visible (selectable red or green) aiming laser, integrated next to each other in a laser block.

Despite its compact dimensions (L/W/H 76 x 45 x 30 mm) and low weight of just 115 g, the newly developed module produces a powerful laser output of up to laser class 3B, permanently controlled via a monitor diode and electronically regulated. The build-on module features a dongle

interface for an eye-safe training mode and effective force-on-force training.

Besides ergonomic, two-handed fingertip operability, the module can be attached to the weapon in various ways and can be adapted to different holster types. The single CR123 battery can be exchanged via the lamp head when the module is mounted. Furthermore, the device offers the great advantage of not being subject to America's strict ITAR export regulations.

The PTAL laser light module and other laser/laser light modules will be on display at the Rheinmetall stand 426 in Hall 10. We also look forward to seeing you at our Enforce Tac stand 310 in the "Armed Forces Area" in Hall 11, where we will be presenting the Fuchs JAGM next generation armoured missile tank destroyer.

### ► Key facts

- New PTAL laser light module for handguns
- Compact, lightweight build on module
- IR close-range illuminator, white light, selectable red or green aiming laser
- Visit us at Enforce Tac - Hall 10, stand 426 and Hall 11, stand 310
