## Rheinmetall Nordic Mortar Day: Rheinmetall presents the capabilities of the next generation of European mortars

Rheinmetall has once again demonstrated its expertise in the future of indirect fire weapon systems. In winter 2026, its subsidiary Rheinmetall Nordic hosted the Rheinmetall Nordic Mortar Day. In front of high-ranking representatives of armed forces, authorities and industry partners from Norway, Sweden, Finland, the Netherlands and Germany, the company presented the latest generation of high-performance European mortar systems in a live demonstration. The focus was on the 120 mm Ragnarok mortar system and the newly developed Mortar Mission Module. This is a European, scalable solution designed to have a decisive impact on the battlefield through its speed, precision, reliability and affordability.

The Ragnarok Mortar Mission Module will provide users with true shoot/scoot capability allowing users to leave the firing position immediately after the last round is fired. The system is designed for high flexibility through its platform and barrel independence.

The live fire demonstration took place in Rena, Norway. Weather conditions were adverse, with double-digit sub-zero temperatures and high humidity. During the demonstration, the Mortar Mission Module integrated in a HX truck demonstrated its high accuracy and rapid response capability. Designed for speed and simplicity, the system can be seamlessly integrated into existing and future platforms, enabling European armed forces to enhance their capabilities easily and without significant logistical effort.

The demonstration underscored the growing importance of European cooperation in strengthening collective defence. In light of increasing geopolitical pressure and growing demand for robust capabilities on the battlefield, Rheinmetall Nordic emphasised the urgency of delivering effective, user-oriented systems that enable nations to act quickly and decisively.

### ► Key facts

- Rheinmetall Nordic Mortar Day with guests from five NATO nations
- 120 mm Ragnarök mortar system and new Mortar Mission Module demonstrated in live-fire conditions in Arctic conditions
- European scalable solution; advantages in terms of speed, precision, reliability and affordability

'Today's security environment requires us to act in a targeted manner,' said Morten Kjorum, CEO of Rheinmetall Nordic. 'Europe's strategic autonomy depends on providing solutions that maximise operational impact while being practical, cost-effective and rapidly deployable. The Mortar Mission Module is the result of close collaboration between Rheinmetall and European industry partners and users, based on transparency, shared goals and technological excellence.'

'Together we are stronger,' added Kjorum. 'Our goal is clear: we want to deliver systems that meet the operational requirements of European soldiers at the speed that the current situation demands.'

With its scalable production presence worldwide, Rheinmetall is ready to meet the growing demand for advanced indirect fire capabilities while ensuring a resilient, sovereign supply chain.
