

► RHEINMETALL AT EUROSATORY 2026

NEW AT EUROSATORY

15 June 2026

A growing threat to airports:

Rheinmetall presents its innovative Skyspotter drone detection system at Eurosatory 2026

Rheinmetall is presenting the Skyspotter counter-UAS system at this year's Eurosatory 2026 in Paris (15 to 19 June 2026). The system expands the Group's already broad portfolio in the field of drone defence with a specialised solution for the protection of critical infrastructure.

The number of drone incidents at European airports is rising steadily. In addition to careless hobbyists, security authorities are increasingly focusing on targeted acts of sabotage and hybrid attacks. These incidents are virtually impossible to predict, yet they regularly lead to massive operational disruptions and enormous economic damage. They highlight the urgent need to drastically increase the resilience of our vulnerable airport infrastructure.

The Skyspotter was developed as a multi-sensor early warning system. Its primary task is to detect potential airborne threats well in advance, identify them precisely and track them seamlessly. By intelligently combining various sensor technologies, the system provides security forces with the necessary real-time information to make decisions and respond flexibly to threats in the sensitive airspace around airports.

With the Skyspotter, Rheinmetall is underlining its position as a leading systems provider of comprehensive and tailor-made drone defence solutions for both civil and military applications.

Visit Rheinmetall at Eurosatory 2026 in Paris to find out more about the Skyspotter and our comprehensive counter-UAS solutions. We look forward to welcoming you at stand F115/F116.

► Key facts

- A bespoke solution to counter the rising number of targeted drone incidents at European airports.
- Protection of vulnerable transport hubs against massive and unpredictable operational disruptions.
- High-precision detection, identification and tracking of airborne threats.
- Visit us at our Eurosatory stand F115/F116
