Rheinmetall Technical Publications GmbH (RTP) is the system house for unmanned aerial vehicles within the Rheinmetall Group and one of the largest providers of complex logistics engineering and technical publications services.

As a military aeronautical engineering company, RTP ensures efficient and professional development, manufacturing and production as well as maintenance of drones at the highest level for our current products ALADIN, LUNA and LUNA NG at the sites in Penzberg, Iffeldorf, Abenberg and Osterröfeld.

At other locations, the focus is on the preparation of technical documentation for operation, inspection, maintenance and repair as well as spare parts documentation for flight, land and naval systems. Logistics engineering also includes the preparation of logistical analyses and concepts.
