# TRUCK**PROTECTION**

**FLEXIBLE CABIN CONCEPTS WITH PASSIVE  
AND ACTIVE PROTECTION**

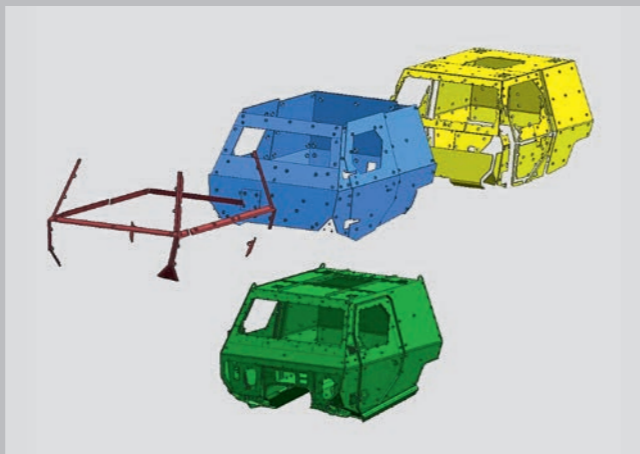

**PROTECTION FOR THE BACKBONE OF THE ARMED FORCES**

**TRUCK CABIN CONCEPTS**

Rheinmetall has developed three different concepts for the design of protected truck cabins. This allows the selection of the best fitting solution for either new developments or the retrofit of existing cabins of truck OEMs. All three concepts allow for the integration of ballistic and mine/IED-protection kits according to customer requirements.

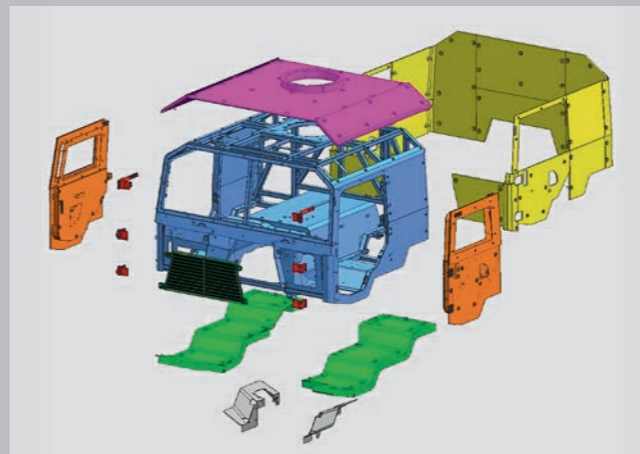

Concept A – Soft Skin Cabin with Armour Kit as Stand-alone inside Cabin

Concept B – Steel Cabin with Add-on-Armour for ballistic and mine/IED protection

**DELIVERED PROTECTION KITS**

- Concept A >250
- Concept B >3.000
- Concept C >500

Concept C – Modular Space Frame with Integrated Armour Kit

**REALIZED PROJECTS**

A variety of modular armouring concepts allow for protection levels to be tailored to suit individual requirements.

**ACTIVE PROTECTION FOR TRUCK CABIN**

In addition to passive ballistic and mine/IED-protection the truck cabins can also be equipped with the active hardkill system StrikeShield and the softkill system ROSY.
